WEEKLY MORBIDITY REPORT

WEEKLY MORBIDITY REPORT

Week Ending JULY 15, 1944

This report gives rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries, deaths). Source material is the weekly communicable disease report. Billed by shore stations within the continental limits of the United States.

WEEKLY MORBIDITY REPORT  
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

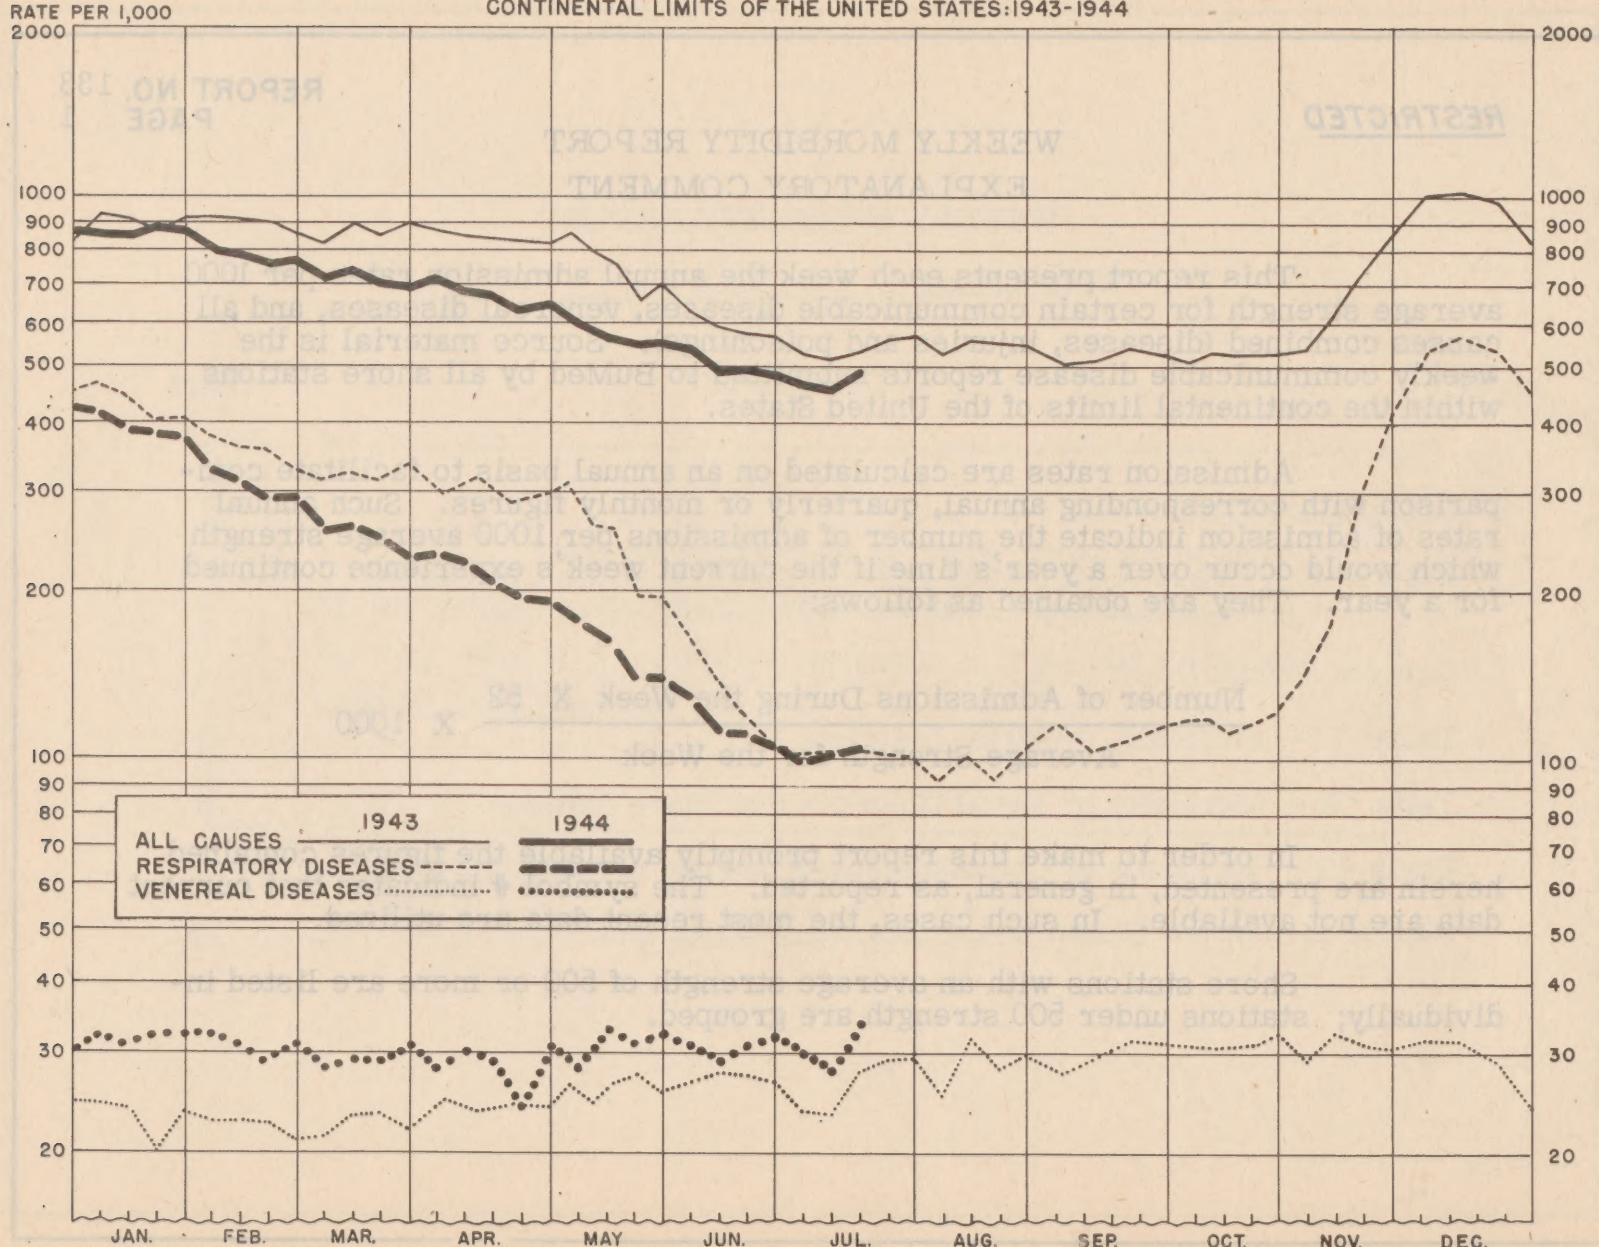

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

RESTRICTED

## WEEKLY MORBIDITY REPORT

REPORT NO. 133  
PAGE 3

### CURRENT TRENDS

Week Ending 15 Jul 1944

The admission rate for All Causes returned this week to the level for the week ending June 17. The highest rate (863) was reported for the Potomac and Severn River Commands, the lowest (393) for the 7th and 12th Districts.

The respiratory disease curve continued upward. An increase in admission rate for these diseases was noted in the 1st, 7th, 8th, 9th, 11th, 12th, and 13th Districts. The highest rate (191) was reported for the 13th District, the lowest (72) for the 12th District.

The venereal disease curve after falling for two weeks turned sharply upward this week to the highest point recorded for the year. The 5th District reported the highest rate (46), the 6th District the lowest (21).

Influenza and Catarrhal Fever. The rate for these infections increased slightly this week. Since the week ending June 10 the rate has continued around 70 and it would appear that this is to be approximately the mid-summer level. This compares favorably with a mid-summer level around 90 for 1943 and around 100 for 1942. The highest rate (117) was reported for the 13th District, the lowest (42) for the 12th District.

Pneumonia--Broncho and Lobar. For the third consecutive week the rate for these infections has been reported at 1, a point well below that reported for the corresponding weeks of both 1942 and 1943. The 13th District reported the highest rate (7), the 4th, 6th, and 7th Districts reported no cases.

Pneumonia, Atypical. For the ninth consecutive week the rate for atypical pneumonia was reported at 2. For the past three weeks the curve for this infection has stood at a higher level than the curve for lobar and broncho-pneumonia combined. The curve continues to stand above the 1943 curve for the corresponding period. The highest rate (7) was reported for the 8th District. The 3rd and 13th Districts and the Potomac and Severn River Commands reported no cases.

RESTRICTED

WEEKLY MORBIDITY REPORT

REPORT NO. 133  
PAGE 4

CURRENT TRENDS--CONTD.

Tonsillitis and Pharyngitis, Acute. The rate for these infections increased slightly this week. The highest rate (67) was reported for the 13th District, the lowest (20) for the 6th District.

Rheumatic Fever, Acute. For the sixth consecutive week the curve has stood at 2. This compares favorably with a rate of 2.3 for the corresponding week of 1943. The highest rate (13) was reported for the 13th District. No District other than the 13th reported a rate over 2. The 6th and 7th Districts reported no cases.

Scarlet Fever. After standing for two weeks at a level of 2 the scarlet fever curve turned back upward to 3 this week. The curve turned upward in the 1st, 3rd, 8th, 9th, 12th, and 13th Districts and in the Potomac and Severn River Commands. The rates for the corresponding weeks of 1942 and 1943 were 0.1 and 3 respectively. The 13th District reported a rate of 30. No other District reported a rate over 3. The 4th, 6th, and 7th Districts reported no cases.

Cerebrospinal Fever, Meningococcic. The rate for this infection rose slightly this week to 0.27. This rate compares favorably with a rate of 0.5 for the corresponding week of 1943. The 3rd, 4th, 6th, 7th, and 13th Districts reported no cases.

Malaria. After standing for the past nine weeks at 2 the malaria rate rose to 3 this week. The 1944 curve, however, has stood below the 1943 curve since the week ending May 13. The highest rate (6) was reported for the 11th District, the lowest (0.95) for the 5th District.

Measles. The rate for measles was reported for another week at 2. The rates for the corresponding weeks of 1942 and 1943 were 1.9 and 1.8 respectively. The highest rate (5) was reported for the 13th District. No cases were reported for the 4th or 6th District or the Potomac and Severn River Commands.
